---

**Tsunamis are rare but serious events. Many areas of coastal B.C. may be threatened in the event of a tsunami. Although the potential for devastating tsunami waves in parts of the province is high, many areas are low-risk areas.**

**Emergency Management BC has divided the province into five (5) zones for notification purposes. These zones are reflected on this map in different colours and the letters A, B, C, D and E.**

**All tsunami notifications prepared by the Province will refer to these five zones. Each of the five designated zones includes all islands and inlets within the location descriptive.**
