

# DEAN RIVER ANGLER REPORT

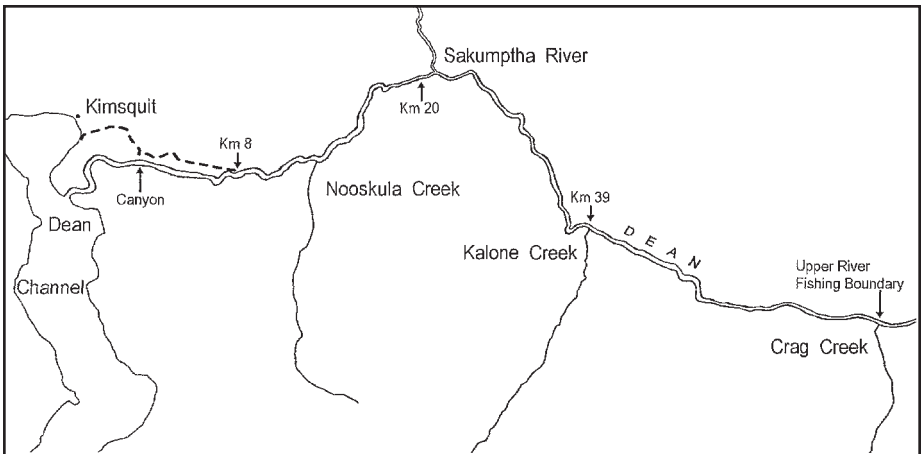

(Prescribed Form)

Your co-operation in keeping an accurate record is appreciated. By tabulating and analyzing the information these cards provide, extremely valuable biological data is created that fisheries managers use to determine run size and timing, catch rates and angler intensity. In addition, this information is used to operate the limited entry draw system, and to ensure that angler overcrowding is avoided.

It is important that you *deposit the completed card* in the boxes provided at Dean River. Should you forget, promptly mail to:

**Ministry of Forests**  
Suite 400 - 640 Borland Street  
Williams Lake, BC  
V2G 4T1

Or email to: [Fish.Support@gov.bc.ca](mailto:Fish.Support@gov.bc.ca)

- Zone 1: Mouth of Dean River to closure signs 100 m below Canyon**
- Zone 2: From closure signs 500 m above Canyon to Nooskula Creek**
- Zone 3: From Nooskula Creek to Sakumptha River**
- Zone 4: From Sakumptha River to Kalone Creek**
- Zone 5: From Kalone Creek to Crag Creek**

## Rotational Angling

Rotation angling is a system used by anglers to conduct themselves so that many people can fish the same water sequentially, while either wading or fishing from a boat. Rotation angling simply means starting at the head of a pool or run and following the immediate downstream angler through the run.

1. Try to fish through the run at the same speed as the downstream anglers and never step in front (downstream) of an angler already on the water unless they ask you to do so.
2. Leave adequate room between the downstream angler and yourself but do not stay stationary unless no one is following you.
3. Upon catching a fish, step out of the line and return to the head of the pool (or start of the line). If you are not sure, avoid problems by simply inquiring about procedures from the anglers already on the waters.
