COMPULSORY INSPECTION & REPORTING

- » In addition to those species requiring Compulsory Inspection or Compulsory Reporting provincially, all moose, lynx, and bobcat taken in Region 8 must be Compulsory Inspected within 30 days of the date of kill. See page 17 for requirements.

NOTICE TO HUNTERS

- » White-tailed jackrabbit, Nuttall's cottontail, badger and other species are protected under the authority of the *Wildlife Act* (hunting is prohibited). Hunters are reminded that there are no hunting seasons for white-tailed jackrabbit, Nuttall's cottontail, or badgers.
- » No Shooting Areas: Hunters should note the Highway No Shooting Areas as outlined on page 10. Note also that the closures for Highway 3 between Manning Park and Princeton and for the Coquihalla Phase III (Okanagan Connector) Hwy 97C are No Shooting and No Hunting Closures.
- » Hunting is prohibited within the Vaseux Migratory Bird Sanctuary and National Wildlife Areas. For more information visit <https://www.canada.ca/en/environment-climate-change/services/migratory-bird-sanctuaries/locations/vaseux-lake.html>.

Wildlife Research in the Okanagan

There are a number of ongoing wildlife research projects in the Okanagan Region at this time focused on mule deer, cougar, and bighorn sheep management. These projects are being conducted in partnership with the Syilx Okanagan Nation, research institutions including the University of British Columbia Okanagan, University of Idaho, local clubs and stakeholders such as the BC Wildlife Federation and Wild Sheep Society of BC, as well as numerous volunteers.

The Southern Interior Mule Deer Project, which has study areas in the West Okanagan, Boundary and Thompson Region, has been ongoing since 2018 and aims to identify the drivers behind declining mule deer populations and assess those drivers relative to harvest regulations, predation, land use changes such as forestry and natural disturbances such as wildfire. As part of this work there are collared mule and white-tailed deer and remote cameras installed across the study areas. Visit <https://bcwf.bc.ca/initiatives/mule-deer-project/> for project updates.

The Southern BC Cougar Project, which has overlapping study areas in the West Okanagan and Boundary, as well as a Kootenay study area, began in 2019 and aims to examine population vital rates such as survival and reproduction, movement and habitat use and diet and kill rates of the primary predator for mule deer. As part of this work, kill sites of collared cougars are investigated to determine where, when and what they are killing. Visit <https://bccougarproject.weebly.com/> for project updates.

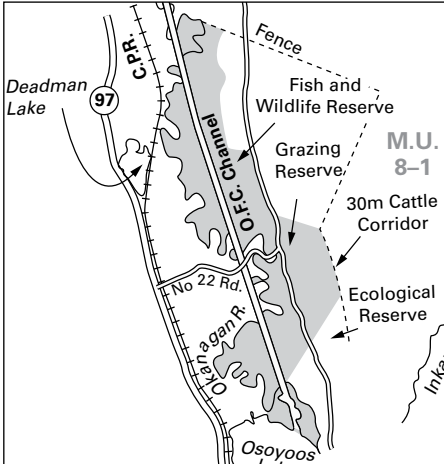

Three disease outbreaks among local bighorn sheep populations, Psoroptes, Mycoplasma ovipneumoniae, and blue tongue, are being monitored through collared animals and the BC Mountain Goat and Wild Sheep Natal App. Conservationists and hunters are encouraged to participate by recording observations of sheep they observe in the field. Sick and dead sheep should be reported to the RAPP line. For more information visit <https://www2.gov.bc.ca/gov/content/environment/plants-animals-ecosystems/wildlife/wildlife-conservation/wildlife-health/wild-sheep-health/bc-goat-sheep-natal-app>.

As part of these research projects, there are many mule deer, white-tailed deer, cougars and bighorn sheep that have been fitted with GPS radio collars throughout the Okanagan. Harvesting these animals is not illegal if taken lawfully. Part of the research aims to look at survival rates and mortality causes, including hunter harvest. If you harvest a collared animal, please report it to the RAPP line to confirm whether the animal is safe to eat due to the possible presence of wildlife immobilization drugs in the meat and return the collar to the Conservation Officer Service or any Ministry office.
